

# The Information Turnpike

ass File's Information Superhighway began with freight when the Authority entered into easement agreements with three private telecommunications companies, allowing them to install a state-of-the-art fiber optic telecommunications

system in the northeast. As part of that agreement, **NearSite** sought and received a twelve (12) fiber cable for its use.

governing high quality 256 Kbit/s voice, video, news, and computer services.

In 1995, Marisfle's foreign office will provide a communications backbone that will enable the state and its entities and towns to take advantage of this leading-edge technology, save money, and improve communications well into the next century.
