

SONY®

MOBILE NAVIGATION

NVX-F160

Asking for directions will soon be a thing of the past, thanks to Sony's mobile navigation system. Once installed in a car, truck or recreational vehicle, the NVX-F160 accurately plots the vehicle's location through digital signals from the advanced Global Positioning System (GPS), and displays that data on detailed, digital moving maps that track the motorist's progress in real time.

Not content to only show present positioning, the system also provides choices of where to go including restaurants, hotels, entertainment and shopping. The moving maps and travel information are recorded on CD-ROM discs called an EtakGuide™ and are displayed right on the NVX-F160's five-inch color LCD screen.

- The system comprises a map disc player (integrating an 8-channel parallel GPS receiver and a CD-ROM drive), a very small (about 3/4-inch thick and 3-3/8 inches in diameter) GPS antenna, five-inch color LCD display and wireless remote control.
- The vehicle's position is automatically updated each second through positional information from the Navstar network of satellites circling the globe.
- High-speed panning and zoom features allow views of details of individual streets or eagle's-eye views of entire cities, regions or road networks.

- EtakGuide includes information on parks, hotels, shops, restaurants, arts and cultural facilities, special events, sports, nightlife, airports, natural resources, even recreational vehicle facilities, and can be accessed when the vehicle is not in motion through an easy-to-use electronic search.
- Clear text and crisp, rich graphics make maps easy to read, and are further supported by audio and video prompts, icons and colorful screen menus.

Available now at a suggested retail price of \$2995.00.
